From 1 April 2022, a new Plastic Packaging Tax (PPT) applies to all plastic packaging manufactured in, or imported into, the UK that does not contain at least 30% recycled plastic.

The tax is designed to provide a clear economic incentive for businesses to use more recycled plastic in packaging. This will, in turn, stimulate increased levels of recycling and collection of plastic waste, diverting it away from landfill or incineration.

Polybags is PPT-ready, so our customers can continue to shop with us as normal whilst we manage all PPT implications and paperwork. This guide is designed to introduce Polybags customers to the PPT and answer questions about how it might impact you and your business.

**Polybags and the Plastic Packaging Tax**

**What is Polybags doing to be compliant with the Plastic Packaging Tax (PPT)?**

As a manufacturer and importer, Polybags will be responsible for accounting for the PPT. Any invoice issued to a business customer from 1 April 2022 will list any products to which PPT has been applied, if applicable (See sample invoice).

**Do I have to pay the tax to HMRC?**

No. As the manufacturer or importer of the packaging, Polybags is responsible for accounting for the PPT and collecting the tax on behalf of HMRC.

**Will the Plastic Packaging Tax affect prices?**

Inevitably, there will be an increase in the cost of some products, particularly food-safe products which cannot contain recycled material (see below). However, Polybags will always endeavour to provide a wide range of packaging options for our customers.

**What records do I need to keep?**

Polybags will list any products to which PPT has been applied on both sales invoices and quotes for bespoke products. In both instances, we will account for the PPT and collect it on behalf of HMRC, so you don’t have to worry about it.

**How much is the Plastic Packaging Tax?**

The rate of tax is currently £200 per metric tonne of plastic packaging.

**How will I know if the tax applies to the products I wish to buy?**

Polybags will highlight whether products are ‘PPT Paid’.

**What packaging is subject to the Plastic Packaging Tax?**

The PPT applies to all packaging that does not contain at least 30% recycled plastic. This includes bioplastics, biodegradable, compostable and oxo-degradable plastics. Plastic packaging is defined as any packaging that is predominantly plastic by weight.

---

Polybags PPT Registration number: XXPPT000000229
There are several factors that need to be taken into consideration:

1. Recycled plastics (using single-layer extrusion) should not be used for the storage of food materials because there are chances of contamination of unwanted substance residues that may be present inside the plastic before recycling.

2. As the ratio of recycled content increases in clear packaging, the following can happen:
   a. The clarity/transparency of clear packaging reduces;
   b. Mechanical properties of the product (tensile strength, impact strength, tear strength and elongation) can reduce;
   c. The level of product imperfections/roughness can increase resulting in gel or clear/black specs and can differ from batch to batch of recyclate.

Over the next few months, Polybags will provide further information on material performance relating to recycled-content products.
